

04 | Using Set Operators

Graeme Malcolm | Senior Content Developer, Microsoft
Geoff Allix | Principal Technologist, Content Master

Module Overview

- What are UNION Queries?
- What are INTERSECT Queries?
- What are EXCEPT Queries?

What are UNION Queries?

- UNION returns a result set of **distinct rows combined from all statements**
- UNION removes duplicates during query processing (affects performance)
- **UNION ALL** retains duplicates during query processing

```
-- only distinct rows from both queries are returned  
SELECT countryregion, city FROM HR.Employees  
UNION  
SELECT countryregion, city FROM Sales.Customers;
```

UNION Guidelines

- Column aliases
 - Must be expressed in first query
- Number of columns
 - Must be the same
- Data types
 - Must be compatible for implicit conversion (or converted explicitly)

DEMO

Creating UNION Queries

What are INTERSECT Queries?

- INTERSECT returns only distinct rows that appear in both result sets

```
-- only rows that exist in both queries will be returned  
SELECT countryregion, city FROM HR.Employees  
INTERSECT  
SELECT countryregion, city FROM Sales.Customers;
```

What are EXCEPT Queries?

- EXCEPT returns only distinct rows that appear in the first set but not the second
 - Order in which sets are specified matters

```
-- only rows from Employees will be returned  
SELECT countryregion, city FROM HR.Employees  
EXCEPT  
SELECT countryregion, city FROM Sales.Customers;
```
